DEPLOY IN KUBERNETES CLUSTER

- Target the IBM Cloud Kubernetes Service region where you wantto work. ibmcloud cs region-set us-south
- 2. Set the context for the cluster in your CLI.
 - a. Get the command to set the environment variable and downloadthe Kubernetes configuration files. ibmcloud cs cluster-config cluster kunal
 - b. Set the KUBECONFIG environment variable. Copy the output from the previous command and paste it in your terminal. The command output should look similar to the following.

> export

KUBECONFIG=/Users/\$USER/.bluemix/plugins/container-service/clust ers/< cluster_name >/< cluster_configuration_file.yaml>

3. Verify that you can connect to your cluster by listing your

workernodes. kubectl get nodes

4. Create the deployment.

kubectl create -f deployment.yaml

3. Create the service.

kubectl create -f

service.yaml

4. Look at the

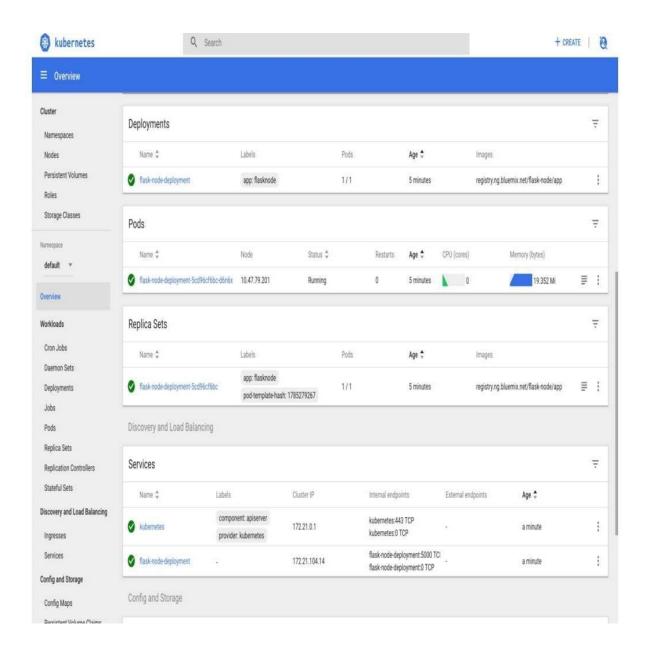

Kubernetes

dashboard from

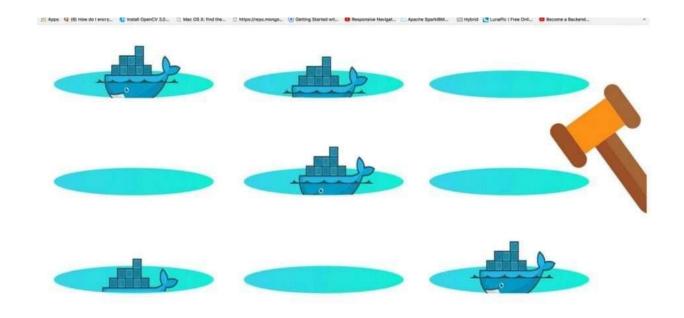

the IBM

KubernetesService

overview page.

7. Finally, go to your browser and ping the Public IP of your worker node

SAMPLE:

...

\$ kubectl apply -f ./deploys/k8s-deployment/deployment.yaml deployment.apps/k8s-nginx-deployment created

٠.,

RUN THE APPLICATION

...

\$ kubectl port-forward svc/k8s-nginx-deployment 8080:80

VERIFY THE APPLICATION RUNNING IN THE CLUSTER

...

\$ kubectl get pods

NAME READY STATUS RESTARTS AGE k8s-nginx-deployment-68d8f8f8f4-f4x6x 1/1 Running 0 30s

```
$ curl localhost:8080
<!DOCTYPE html>
